

1. 无法从Docker Hub下载镜像文件

- 报错信息：

Error response from daemon: Get "<https://registry-1.docker.io/v2/>": dial tcp ...

- 解决方案：

```
# 编辑Docker配置
vim /etc/docker/daemon.json

# 添加内容如下
{
  "registry-mirrors": [
    "https://docker.m.daocloud.io",
    "https://noohub.ru",
    "https://huecker.io",
    "https://dockerhub.timeweb.cloud",
    "https://registry-1.docker.io",
    "https://wru66vrw.mirror.aliyuncs.com",
    "https://mirror.ccs.tencentyun.com"
  ]
}
```

2. 加载默认的FAISS知识库时抛出异常

- 报错信息：

```
2024-09-15 20:32:49.163 | INFO | chatchat.server.knowledge_base.kb_cache.faiss_cache:load_vector_store:109 - loading v
ector store in 'samples/vector_store/bge-large-zh-v1.5' from disk.
2024-09-15 20:32:49.317 faiss.loader 8471 INFO Loading faiss with AVX2 support.
2024-09-15 20:32:49.346 faiss.loader 8471 INFO Successfully loaded faiss with AVX2 support.
2024-09-15 20:32:49.365 | ERROR | chatchat.server.knowledge_base.kb_cache.faiss_cache:load_vector_store:140 - FAISS._i
nit__() got an unexpected keyword argument 'allow_dangerous_deserialization'
2024-09-15 20:32:49.366 | ERROR | chatchat.server.chat.kb_chat:knowledge_base_chat_iterator:221 - error in knowledge ch
at: 向量库 samples 加载失败。
```

- 解决方案：

定位到脚本：`/root/Langchain-Chatchat/libs/chatchat-`

`server/chatchat/server/knowledge_base/kb_cache/faiss_cache.py` 然后，注释第120行代码。

```
114         if os.path.isfile(os.path.join(vs_path, "index.faiss")):
115             embeddings = get_Embeddings(embed_model=embed_model)
116             vector_store = FAISS.load_local(
117                 vs_path,
118                 embeddings,
119                 normalize_L2=True,
120                 # allow_dangerous_deserialization=False,
121             )
```
